

José Luiz Monteiro Junior

Senior Frontend Software Engineer

About me

Experienced and professional Frontend Developer, with about 10 years of valuable experience developing consistent and performative code. Familiar and adept in working with React, Javascript, HTML and CSS. Passionate about technology and innovation, bringing forth a motivated attitude and the ability to establish strong and productive relationships with my coworkers.

Experience

Collective Health, Remote – *Senior Software Engineer*

Mar. 2021 - Jun. 2026

Acting as a contractor at Collective Health. I have worked as Frontend engineer mostly, though I participated in Full-Stack activities. Recently worked on Virtual Agents using dialogflow, developing webhooks and integrating services for a smooth chat and IVR experience. Also worked maintaining the member portal application, using NextJS as the main technology. Lead an internal tool development for teams to configure and customize plans. Also worked on the payments team helping migrate both Frontend and Backend to graphql. Worked on many dependency migrations such as NodeJS, NextJS, Webpack, Lerna and so on. Also worked on the development of the Member Portal mobile app, done in React Native. All while maintaining the existing internal lib for reusable UI/UX components, along with designs, managers and other company members.

Technologies: React, NextJs, NodeJS, xState, Typescript, Javascript, Redux, Jest, Lerna, Yarn workspaces, Turborepo, Apollo client, Webpack, GIT, Claude Code, Java and Postgres, React Native.

Meta, Remote – *Senior Frontend Software Engineer*

Nov. 2020 - Mar. 2021

Acted as a contractor at Localiza. Worked using agile scrum with the SAFe framework, developed and designed a web application as a service, providing car rental for app drivers such as Uber and 99.

Technologies: C#, .NET, Microsoft SQL Server, Javascript, ES11, React, React-Redux, Jest, Styled-components and GIT.

Totvs, Cascavel, Paraná, Brazil – *Senior Software Engineer*

Jun. 2017 - Nov. 2020

Started working on a legacy ERP product as part of the backlog team, developing mainly new features in the core of the application, used by the teams responsible for the customization of each client. Here I created and developed a customization mechanism for the whole application, which greatly reduced the effort needed to customize the visual identity of a new client or the migration for an existing one.

Technologies: Javascript, Html, Css, jQuery, JPA, Java, vRaptor, Hibernate, Liquibase, Postgres and WildFly using Apache Subversion at the beginning and later migrated to GIT .

A few months later I worked on the planning, definition and development of a b2b e-commerce for one of our biggest clients, fully integrated with their current ERP using technologies that I had never worked before at that moment.

Technologies: PHTML, CSS, Javascript, Magento 1.x, PHP and MySQL.

After finishing the B2B product, I joined the innovation team and worked on a brand new SaaS CRM, also on the creation and development of a library of reusable UI/UX components, used internally across all CRM's teams using technologies such as Reactjs; And, as well in the development of the mobile offline-first application for this CRM.

Technologies: Java, Kotlin, Spring Boot, Spring Cloud, RDS PostgreSQL with multi-tenancy, ElastiCache Redis, SQS, SNS, ECS, FlyWay, Restdb, Ebean, Gradle, Javascript, ES11, React, Webpack, Jest, Chimp, ChaiJS, MobX, React-native, React Navigation, Styled-components, SQLite, KnexJS.

MV, Cascavel, Paraná, Brazil – Software Engineer

Nov. 2015 - Jun. 2017

Worked in the organization and planning of sprints, product support and development of new features for the largest public health management system in Brazil.

Technologies: Javascript, Html, Css, jQuery, JPA, Java, vRaptor, Hibernate, Liquibase, Postgres and Apache Tomcat using Apache Subversion as version control system.

Also worked on the planning, definition and development of a project for S.A.M.U. (Mobile Emergency Medical Service), in this project I acted as a frontend developer performing UI/UX analysis, aligning with the client the best solutions for one of the most important public health projects in Brazil.

Technologies: Typescript, AngularJs, PugJs, Gulp and Bower using GIT in this one.

Dimebras, Remote (Freelance) – B2B & B2C | E-Commerce

Fev. 2019 - Mar. 2020

Worked on the development of a web and mobile application for a b2b and b2c e-commerce, for a pharmaceutical products distributor. In this project I had to be in direct contact with the customer, develop prototypes and "MVPs", plan, analyze, negotiate and estimate the proposed requirements. Maintain two environments for test and production purposes, and develop a full integration with the actual ERP being used by the client.

Technologies: AdonisJS, Redux & Redux Saga, PostgreSQL, Redis, Javascript, ES11, React, Styled-components, Typescript, React-native, React Navigation.

Education

University Positivo, Cascavel, Paraná, Brazil – Game Design

Mar. 2018 - Feb. 2019

The Game design course offers the professional area practical subsidies for managerial performance in the game production market. During class I learned the full cycle of game production, applicability, fun and gameplay as well establishing interfaces that allow interaction between a game and its target audience.

University Center of Cascavel, Cascavel, Paraná, Brazil – Analysis and Development of Systems

Jan. 2014 - Dez. 2016

I learned the fundamentals of computing, their applications and systems developments, as well to apply the administrative and entrepreneurial techniques to this area.
